

How educational institutions can make the most of the PSTN/ISDN switch-off.

The PSTN/ISDN switch-off is rapidly approaching. Discover how moving to a new, communication system could benefit your school, college or university.

Cut costs.

Moving to a new VoIP, SIP or Unified Communications system could help you save money. Cut your line rental, call charges and infrastructure costs dramatically. Whatever system your school is using right now, switching could significantly reduce the amount you spend on comms.

Improve student (and staff) experience.

By moving to a digital phone system, you'll get access to loads of new features – conferencing, presence, social media integration, and more. That means you can deliver even better experiences to your students and your staff.

Gain more flexibility.

You'll be able to access your systems on any device – laptop, mobile, tablet – from anywhere. So, if the school has to close, remote lessons and meetings can still go ahead via video or conference call.

Stay Resilient.

An automatic backup and failover means you'll always stay connected, and your data can be backed up regularly.

Get up and running quickly.

By working with experts, you can make sure your school gets the most out of your new system. Once the plan is in place, in most cases physical lines don't need to be installed, so you can get your new system running quickly and easily.
